## INTRODUCTION

The Campus Safety Program is a Half-day workshops delivered to classes of 30 students designed to increase student awareness of their surroundings and potential threats to public safety.

It is aimed at students aged 6 - 18 years.

The program is delivered around the FACES™ software program which is a cloud based SAAS (software as a service).

Software as a Service (SaaS) is a cloud-based software model that delivers applications to end-users through an internet browser. Facail Composites Inc. in conjunction with Amazon Web Services will host the FACES™ application for our education customers to access on-demand. With a SaaS offering, you do not have to think about how the service is maintained or how the underlying infrastructure is managed; you only need to think about how you will use the software. Another typical aspect of a SaaS model is pricing that's paid on a subscription or pay-as-you-use model, instead of purchasing all functionality at once in one big chunk.

### Why is SAAS Important?

SaaS is important because it gives businesses access to powerful software that would previously have been too expensive or energy-intensive to run from on-premises environments. The SaaS provider manages the hardware, the software tools, and the application in its own data center or cloud environment. You can access the software directly from the browser or mobile application. The subscription-based model of SaaS also means you can scale your use of software up or down as your business needs it. We give some benefits of SaaS below.

### Cloud accessibility

You can access your SaaS from any device with an internet connection. Under more traditional software models, you could only access business applications from the workstations on which they were installed. This accessibility is increasingly in-demand because of hybrid and home working models.

## **Lower upfront costs**

SaaS vendors typically offer a subscription-based model that reduces upfront costs of traditional software such as licenses, installation, or infrastructure management. There is also no need to invest in additional computing resources to run the software, as the vendor manages everything on its servers.

## **Reduced ongoing costs**

As the SaaS model charges a standard fee, you can confidently plan how much your software services will cost per annum. Ongoing maintenance is overseen by your SaaS providers and covered by your subscription. You'll also avoid paying for increased server capacity if you need to scale up your SaaS solution.

## **Rapid deployment**

SaaS eliminates the installation and configuration associated with on-premises software, meaning you can roll out software across your business as soon as your enterprise subscription begins.

## **On-demand scalability**

SaaS allows you to easily add more services or storage to your subscription as needed without incurring the costs of upgrading your infrastructure. The scalability of SaaS is perfect for businesses that are growing quickly, as they can add new features and users when it suits them.

## **Reliability**

SaaS providers invest heavily in rigorous cybersecurity protocols and disaster recovery capabilities. Many SaaS providers promise 99% or even 99.9% uptime, meaning all you need in order to work is a reliable internet connection.

## **Automatic updates**

Software vendors regularly make incremental updates and security patches to their software. Updates can be set to deploy automatically without the need for IT support.

## Integration

You can integrate SaaS applications with other platforms and systems using APIs. You can customize the software to suit your particular requirements without infrastructure costs.

## Real-time data and analytics

SaaS applications often collect data regarding usage and performance, and can offer insights in real-time.

# CONTENT

## Workshop Details

Supported by FACES™ Composites, Inc. the Community Safety Awareness Workshops are designed to increase students awareness of their surroundings, develop knowledge and understanding of the local Police support and improve personal and public safety.

Each workshop lasts approximately 2.5 hours and caters for up to 30 students per session.

## Workshop Content

Students will be presented with a scenario where their role is to solve a crime.

The experience of solving the crime committed will present a number of scenarios and increase their awareness of several areas including:

- Safe use of Social Media and other digital content.
- Personal awareness of their surroundings.
- How to access Police and Community Safety services.
- Steps to ensure personal and public safety.
- Understanding the role of a witness and valuable observation skills.

*“FACES gets students motivated and engaged in the lesson, Its a win win for all of us ”*

At one point during the workshop students will be selected to play the role of a witness.

They will be presented with a scenario where they observe a scene and they have to remember an individual's characteristics to recreate a digital representation using the FACES™ software.

## Participant Outcomes

- Participants become more aware of their surroundings are able to identify threats to personal or public safety.
- Participants are able to identify the risks involved in improper use of Social Media.
- Participants know who to contact if they witness any suspicious activity and when to call 999.
- Participants are able to describe characteristics of people they meet or observe.
- Participants gain knowledge around the consequences of a criminal record.

## School Outcomes

- Schools are provided with free software exceeding the value of £10,000 in order to repeat the workshops internally as often as required.
- Teachers are provided with the experience and resources required to repeat the Community Safety Awareness Workshops.
- Schools can raise awareness of consequences for Anti-Social Behaviour.

## Community Outcomes

- Increased community safety through improved public awareness of potential threats.
- Improved witness accounts for Police incidents.
- Improved Public/Police relations and reduced unnecessary police line calls.
