

FACES™ COMPOSITES

THE CLOUD COMPOSITE ENGINE

— Any Time & Any Where —

Cops & Kids

TRANSFORMING FACIAL COMPOSITE TECHNOLOGY

Cloud-Based Facial Composite Solutions
for Investigation, Training, Research &
Professional Applications

SECURE CLOUD PLATFORM

Access powerful tools
securely from any device,
anytime, anywhere.

FAST & EFFICIENT

Generate high-quality
composites in minutes,
not hours.

ACCURATE & RELIABLE

Advanced algorithms and
flexible tools deliver
lifelike, dependable results.

COLLABORATE SEAMLESSLY

Share, review, and refine
composites in real time
across teams and locations.

BUILT FOR PROFESSIONALS

Trusted by experts for
investigations, training,
research & more.

"With so many applications for schools, FACES could become a significant part of a schools' curriculum and beyond!"

Smart Schools = Smart Kids! = Safe Schools = Safe Kids!

It's a simple fact, Kids learn better in a safe environment. They need to feel secure and they need to be secure. With "FACES™: Cops and Kids" program, schools can feel safer and be safer!

Cops and Kids!

Interacting on a daily basis, police officers become a significant role model for the student body, representing law and order and community service. "FACES™: Cops and Kids Program" teaches children about law enforcement's role, responsibilities and the equally important fact that police officers are a child's friend.

School Safety!

With FACES™: software available in the schools, students, teachers, staff and parents, who observe a suspicious person or someone who may be suspected of a crime, will have the resources available to develop an artist-quality facial composite within minutes.

Learning Interview Skills!

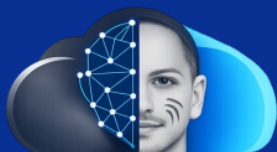

"FACES™: Cops and Kids" program teaches students to use interview skills, both direct and cognitive, to get information from others. While learning these skills, plus basic communication techniques, students will soon build their personal confidence. Cognitive interviewing teaches students to be thorough, comprehensive and effective investigators, an attribute for problem-solving. In addition, a host of other benefits are gained: memory-building, speech, articulation and more!

Memorization!

"FACES™: Cops and Kids" program teaches children a variety of ways to remember faces, statements and situations. These skills enable students to increase short term memory, help them associate words, phrases and situations together to improve recollection of facts and figures. Classroom lessons, homework and study materials are more easily accessed from memory, helping the students retain more information and earn better grades.

Where Art and Science come Together!

FACES™: is an art-based software program, allowing students to create artist-quality facial composite drawings, without having pre-developed drawing skills. Art teachers will love working with the FACES software and should be able to offer the training necessary to make the facial composites even more accurate. "FACES: Cops and Kids" program brings Art and Science together in a fun and rewarding way!

About

By using FACES™ Schools can provide a unique Campus Safety Program. The program has been developed to improve concentration and focus and is aimed at students from 6-18.
